

Quality policy

ANSTAR OY aims to deliver high-quality products for the construction industry. Active product development ensures that the existing products have better competitive preconditions and creates new products.

The products are delivered based on official approvals or the customer's specifications. An agreement has been made with Inspecta Sertifiointi Oy on the quality control of these products. Other products are delivered with their own product descriptions or in accordance with the agreements made with the customer. The customer receives flawless products combined with a flexible service.

Minimising the environmental load and improving environmental issues continuously in all of our operations is important to us; in other words, environmental management is a comprehensive way of thinking in our company, and it has merged into one single management method together with quality and performance management.

The company has a quality system, which continues to fulfil the requirements of the international standards ISO 9001, ISO 14001 and EN 1090-1.

We comply with the statutory obligations and regulations and follow their development.

Goals

1. **Customer-oriented approach**
2. **Creating added value for the customers**
3. **Responsibility for safety and the environment**
4. **Continuous development**

All people working with the company are aware of this quality policy, and they understand it and implement it in all of their duties.

The managing director is responsible for ensuring that the quality policy is valid at all levels of the organisation and that this quality system is implemented.

We evaluate our environmental activities with regular internal audits. Process indicators are used to monitor the realisation of goals.
